

## SwinDid Route Tables

This table shows all the routes that can be set from all signals on the SwinDid Sim.

In cases where more than one route is available to the same location, all are listed, with the 'preferred' route (the one that the interlocking will try first) shown at the top.

Only controlled signals are shown, and if the route can be autoset (using the 'a' button), this will be shown in the Notes column.

| From | To       | Points Normal            | Points Reverse      | Notes                  |
|------|----------|--------------------------|---------------------|------------------------|
| 4    | 22       | 2452                     | (none)              | auto working available |
|      | 624      | 2445 2451                | 2452                |                        |
